GENERAL INFORMATION:
APPLICANT: Strategene
TITLE OF INVENTION: Humanized Polynucleotide Sequence Encoding Renilla Mulleri Green
Patent No. 6645761
TITLE OF INVENTION: Fluorescent Protein
TITLE OF INVENTION: Fluorescent Protein
FILE REPERENCE: 25436/1755
CURRENT APPLICATION NUMBER: US/09/839,650
CURRENT FILING DATE: 2001-04-19
NUMBER OF SEQ ID NOS: 3
SOFTWARE: Patentin version 3.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                            US-09-890-463-6

1st strand of cDNA was synthesized with reverse transcriptase and oligo(dY) beads, then cDNA was amplified by PCR using modified SMART primers. The final CDNA was amplified by PCR using modified SMART primers. The Hinal CDNA was cloned in pAMPI vector in annealing reaction with Uracil DNA dycosylase (UDG). Library constructed by X.Korshunova and M. Lovett. Library materials provided by Mills UC & Gordon JI.
Putative full length read
                      This sequence is the direct result of the Base calling software phred (default parameters). It is the raw base calls. To aid in the identification of the high quality insert the software Lucy (default parameters) has been run on this sequence. Lucy identified the region [124,60].

Plate: Talt538 row: B column: 11.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Googawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial ECORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw sp, the same strain used for the BDGP's pland BAC libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACRAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sfil (ggccattatgggc); Site 2: Sfil (ggccgctcggc);

Non-normalized full-length enriched library 5' and 3'
adaptors were used in cloning as follows: 5' adaptor
sequence: 5'-CACGCCCATTATGCCC-3' and 3' adaptor sequence:
5'-ATTCTAGAGGCGAGGGGCGACATG-dT(30) BN-3' (where B = A,
c, or G and N = A, C, G, or T). Average insert size 1.71
kb (range 0.5-3.0 kb). 15/15 colonies contained inserts by
PCR. This library was enriched for full-length clones and
was constructed by clontech Laboratories (Palo Alto, CA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

Sill (ggocattatgoca): Site 2: Sill (ggocacttagoca): Juleary is oligo-dT primed and directionally cloned. cDNA was prepared from a glandular pool of tissues from thyoid, parathyroid, adrenal, cortex and pineal gland. 5' and 3' adaptors were used in cloning as follows: 5' adaptor sequence: 5'-CACGACGATTATGGCC-3' and 3' adaptor sequence: 5'-ATTCTAGAGCCGAGCGCGCCGATTGGCC-3' and 3' adaptor sequence: 5'-ATTCTAGAGCCGAGCGCGCCGATTGGCC-3' and 3' adaptor sequence: 5'-ATTCTAGAGCCGAGCGCGCGCATG-GT(30) BN-3' (where B = A, C, or G and N = A, C, G, or T). Average insert size 1.38 kb (range 0.60-3.5 kb). 15/15 colonies contained inserts by PCR. This library was enriched for full-length clones and was constructed by Clontech Laboratories (Palo Alto, CA). Note: this is a NIH_MGC Library."

to manutacturer's instructions. Reverse transcription and library construction were carried out with the Uni-Zap XR vector Xit (catalog # 237211, Stratagene) and Uni-Zap XR digapack III Gold Cloning Kit (catalog # 237612), both from Stratagene (La Jolla, CA, WSA), according to manufacturer's instructions. Briefly: 1.5 ug mRNA was reverse transcribed using a hybrid oligo (dT) linker-primer that contains an Xho I site. Pites strand synthesis was primed with the linker- primer and transcribed using Moloney murine leukemia virus reverse transcriptase (WMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DAP polymerase and RNase H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with EcoR adapters in the presence of ligase and digested with Xho I. The CDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clonteen Chroma Spin-1000 (Clonteen, Palo Alto, CA) columns to enrich for CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and upon tirration on XLI Blue NRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescue plasmid DNA from the phages. Upon plating of the rescue plasmid DNA from the phages. Upon plating of concertes (FM) plasmid purification kit (Invitrogen, Concerte (FM) plasmid purification kit (Invitrogen, Carlsbad, A3 as instructed by the manufacturer. EST from the 5' end of the CDNA perseparent and 25% at reacret had or secuence of the manufacturer. EST from the 5' end of the CDNA secuencing chemistry (Adopled
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Blosystems, Foster City, Ch. Sequencing reactions were performed on MJ Tetrad thermal cyclers (MR Research, Waltham, MA), and analyzed on 3700 automated capillary sequences using POP5 polymer (Applied Blosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have i copy, 14.3% 2, 12% 3.10; 1.4% 11.50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."

by 191000 by Man. Carried out as part of a Determination of this BAC-end sequence was carried out as part of a Collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegaw and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         738
